Version history

Version 0.1 (2013-01-31)

- Initial version.

Version 0.2 (2013-02-08)

- Added **Tick barline**.
- Changed names of time signature, tuplet and figured bass digit glyphs to ensure that they are unique.
- Add upside-down and reversed G, F and C clefs for cancrizans and inverted canons.
- Added **Time signature +** and **Time signature fraction slash** glyphs.
- Added Black diamond notehead, White diamond notehead, Half-filled diamond notehead, Black circled notehead, White circled notehead glyphs.
- Added 256th and 512th note glyphs.
- All symbols shown on combining stems now also exist as separate symbols.
- Added reversed sharp, natural, double flat and inverted flat and double flat glyphs for cancrizans and inverted canons.
- Added trill wiggle segment, glissando wiggle segment and arpeggiato wiggle segment glyphs.
- Added string **Half-harmonic**, **Overpressure down bow** and **Overpressure up bow** glyphs.
- Added **Breath mark** glyph.
- Added angled beater pictograms for xylophone, timpani and yarn beaters.
- Added alternative glyph for **Half-open**, per Weinberg.
- Added **Scrape from rim to center** and **Scrape around rim** glyphs.
- Added **Start of stimme** glyph.
- Added colon for tuplet ratios.
- Added stem down versions of mensural notes, and signum congruentia and custos glyphs.
- Added three additional mensuration signs.
- Added Riemann Function theorys glyphs.

Version 0.3 (2013-03-11):

- Moved combining flags glyphs to accommodate glyphs for 256th note stem up, 256th note stem down, 512th note stem up and 512th note stem down.

Version 0.4 (2013-05-16):

- Added range for Arel-Ezgi-Uzdilek (AEU) accidentals for Turkish maqam music.
- Added equals sign and open time signature glyphs.

Version 0.5 (2013-07-08):

- Many existing code points have been changed, as a result of hundreds of new glyphs being added, plus a number of new ranges.
- Added long and very long system dividers for very large scores.
- Added heavy, double heavy and dotted barlines.
- Added square coda and small repeat signs for repeats within bars.
- Added recommended stylistic alternates for segno and coda for the appearance preferred by Japanese publishers.
- Added quindicesima bassa G clef and F clef, G clef combined with C clef, G clefs designed to be ligated with numbers below and above to show the transposition of an instrument, plus recommended ligatures for G and F clefs with numbers above and below; also added G, C and F clefs with arrows up and down, which may be used either as alternatives for octave clefs or to represent the extremes of register on an instrument, and semi-pitched percussion clefs, plus a bridge clef.
- Removed "tall" versions of 6- and 4-string tab clefs, and instead made them recommended stylistic alternates, together with versions that use letterforms with serifs.
- Added +, -, X (multiply), comma, parentheses glyphs for time signatures, plus basic fractions, and Penderecki-style open time signature.
- Added specific noteheads for double whole note and whole note to the noteheads range rather than relying on the glyphs in the pre-composed notes range.
- Added shaped noteheads for specific note values (double whole note, whole note, half note, and quarter note and shorter); also added large up- and down-pointing triangles for highest/lowest notes played by an instrument.
- Added large slashed circular noteheads as used by Stockhausen for notating gong/tam-tam hits.
- Added combining glyphs for note clusters of specific note values.
- Added noteheads with *solfège* and chromatic note names embedded within them, as seen in "EZ-Play" educational scores.
- Added specific range of noteheads for sacred harp shape note singing.
- Added pre-composed 1024th notes, tails and rest.

- Added range for typing simple beamed groups of notes in text-based applications,. Designed to be used in conjunction with pre-composed notes, and allowing beamed groups with rhythmic values between 8th notes and 64th notes, plus ties and triplets.
- Added combining stems for multiphonics, damp, sussurando, Saunders vibrato pulse accent.
- Added four- and five-stroke tremolos plus Wieniawski-style unmeasured tremolo glyphs.
- Added stylistic alternates for flags: straight flags; and shorter stem-up flags to avoid collisions with augmentation dots.
- Separated accidentals into several discrete ranges based around the various accidental systems, including 12-EDO, 24-EDO, the system of up- and down-pointing arrows favoured by Gould, Stein-Zimmermann (also known as Tartini-Couper), Sims (also known as Maneri-Sims, due to the adoption of Ezra Sims' accidentals by Joe Maneri of the Boston Microtonal Society), Ben Johnston, Marc Sabat and Wolfgang von Schweinitz's Extended Helmholtz-Ellis Just Intonation Pitch Notation.
- Added George Secor and Dave Keenan's Sagittal system of accidentals.
- Added accidentals used in Turkish folk music.
- Added Persian accidentals.
- Added staccatissimo wedge and stroke glyphs.
- Added very short and very long fermatas, plus short caesura.
- Added left and right halves of multirest H-bars and old-style quarter rest as seen in e.g. Novello editions.
- Added ventiduesima (three octaves, "22") glyphs to octaves range.
- Added precomposed glyphs for common dynamics and *niente* circle for hairpins.
- Added *schleifer* (long mordent) and Haydn ornament.
- Added additional brass techniques, including short, medium and long versions of lift, doit, lip fall, smooth fall, rough fall, plus jazz turn.
- Added range of glyphs for embouchure tightness, reed position, multiphonics, and stylistic alternates for double- and triple-tonguing with no slurs.
- Added further overpressure glyphs, plus *jété*, *fouetté*, Rebecca Saunders's "vibrato pulse" accent, thumb position and indeterminate bow direction to string techniques range.
- Added plectrum pictogram and combining damp glyph for note stems to plucked techniques range.
- Added arrows for breathing and intonation, plus combining *sussurando* glyph for note stems, to vocal techniques range.

- Added pedal pictograms, *sostenuto* pedal symbols, and half-pedal marks to keyboard techniques range.
- Added pictograms for metal rod and tuning key to harp techniques range.
- Added Smith Brindle's pictograms for tuned percussion instruments.
- Added pictogram for Indian table, plus stylistic alternate for tambourine as used by Stockhausen.
- Added pictogram for football rattle, plus Smith Brindle's pictogram for castanets as a stylistic alternate.
- Added pictogram for handbell, plus stylistic alternates for cow bell (from Berio) and sleigh bell (from Smith Brindle).
- Added pictogram for Chinese cymbal.
- Added pictogram for tam-tam with beater from Smith Brindle.
- Added pictogram for maracas, rainstick, plus stylistic alternate for maraca from Smith Brindle.
- Added pictogram for megaphone.
- Added soft and hard glockenspiel beaters, superball beaters, wound beaters with hard and soft cores, plus soft, medium and hard gum beaters.
- Added pluck lift to handbells range.
- Added "Theme" indicators to analytics range.
- Added minor (minus sign) glyph to chord symbols range.
- Added mensural proportion glyphs.
- Added combining raise and lower glyphs to figured bass range.
- Added repetition, angle brackets, and prefix + and ring glyphs to Function theorys range.
- Added new range for multi-segment lines, including moving all of the various "wiggle" glyphs (for trill, glissando, arpeggiando, vibrato, etc.) plus the 11 ornament strokes from the Unicode Musical Symbols range into this range, and adding further glyphs for variable speed trills, alternate arpeggiato ending glyphs, wavy lines, squaretooth and sawtooth lines, group glissando, circular motion, and variable speed and intensity of vibrato.
- Added new range of pictograms for electronic music, including microphone, loudspeaker, transport controls, volume level and MIDI controller level.
- Added new "do not copy" glyphs, eyeglasses and choral divide arrows glyphs to the miscellaneous symbols range.
- Adjusted the registration of many glyphs (e.g. noteheads, accidentals, time signatures, flags, rests) in Bravura in line with the interim guidelines for metrics and registration for SMuFL-compliant fonts intended for use with scoring applications.

Version 0.6 (2013-07-29):

- Added opening parenthesis and closing parenthesis for noteheads, circled slash notehead, heavy X and heavy X with hat noteheads, as used in Dante Agostini's drum method.
- Added muted slash noteheads.
- Added "si" note name noteheads for French solfège, and H sharp note name noteheads for German.
- Added combining rim shot stem.
- Added "sharp sharp" accidental for compatibility with MusicXML.
- Added extended Stein-Zimmermann accidentals with arrows.
- Added one-third-tone sharp and two-third-tones sharp accidentals as used by Xenakis.
- Significant revision to the ornaments range, including splitting into separate ranges (common ornaments, other baroque ornaments, combining strokes for trills/mordents, precomposed trills/mordents). A small number of glyphs from previous versions of SMuFL have been removed to make way for symbols drawn from Frederick Neumann's authoritative book on baroque ornamentation.
- Added left hand pizzicato.
- Added recommended stylistic alternates for Bartok pizzicato above/below.
- Added recommended stylistic alternates for 'Ped.' and 'Sost.' that do not include terminal dots.
- Added choke cymbal glyph from Weinberg.
- Added open, half-open and closed wah/volume pedals, left- and right-hand tapping glyphs for guitar.
- Added new range for arrows and arrowheads, including moving the up/down/right/left arrows from the vocal techniques into this new range.

Version 0.7 (2013-11-27):

- Introduced canonical names for every recommended glyph, which are intended to be immutable. Code points, on the other hand, may change as required to accommodate insertions or deletions of glyphs.
- New **Notes for implementers** section with expanded guidelines for glyph registration, with changes for precomposed stems and stem decorations (which should now be centered around x=0) and flags (which should be positioned vertically relative to the end of a stem of normal length at y=0).
- Added specification for JSON metadata files for SMuFL and for SMuFL-compliant fonts, developed in conjunction with Joe Berkovitz.

- Significantly expanded the repertoire of glyphs for Medieval and Renaissance notation, with new ranges for clefs, accidentals and ligatures, plus considerable reworking of the notes and prolations ranges, expansion of the repertoire of glyphs for plainchant notation (with new ranges for staves, divisions, clefs and articulations, and a wider range of neumes).
- Added range for Daseian notation, as found in the ninth century treatises *Musica enchiriadis* and *Scolica enchiriadis*.
- Added new range of control characters for adjusting the staff position of staff-relative glyphs, intended for fonts designed for text-based applications.
- Added narrow and wide staff line glyphs, intended for fonts designed for text-based applications.
- Added C clef ottava bassa, and recommended stylistic alternate for G clef ottava bassa with parentheses around the 8.
- Added control characters for time signature digits to allow digits to be stacked vertically, intended for fonts designed for text-based applications.
- Added square double whole note (breve) notehead.
- Added new combining harp string noise for stem glyph, and corresponding precomposed stem glyph.
- Added four further quarter-tone accidental symbols to “other microtonal accidentals” group.
- Added some percussion playing technique symbols from Dante Agostini’s method books.
- Added a *golpe* (tap the pick guard) glyph from Claude Worm’s flamenco guitar method book.
- Added short and long fermata glyphs as used by Henze.
- Added combining glyphs for accordion couplers, allowing the creation of any coupler diagram not explicitly encoded.
- Added “pf” dynamic.

Version 0.80 (2014-02-03):

- Based on community feedback, added clarification that code points for glyphs may change until SMuFL reaches version 1.0, after which point existing code points will become immutable.
- Glyphs in SMuFL encoded in the primary range of U+E000–U+F3FF are no longer considered “mandatory”, but rather they are “recommended”: in order to be considered SMuFL-compliant, a font need not implement every recommended glyph, just as a text font need not implement every Unicode code point in order to be considered Unicode-compliant. Fonts need only implement those glyphs that

are appropriate for their intended use at the correct SMuFL code points in order to be considered SMuFL-compliant.

- Changed guidelines for metrics of text-like glyphs (e.g. dynamics, D.C./D.S. markings in repeats) in fonts intended for use in scoring applications, such that it is recommended that the x-height of such glyphs is around 1 staff space (0.25 em).
- Added Ivan Wyschnegradsky's system of 72-EDO accidentals.
- Added Bosanquet's comma up/down.
- Dispersed the glyphs formerly in the Sagittal-compatible accidentals range to other ranges, and revised the canonical glyph names for Sagittal accidentals that describe specific ratios in order to make those ratios clearer.
- Added slashed sharp/flat accidentals used by John Tavener in his Byzantine-inspired choral works.
- Added left/right parentheses for accidentals.
- Added new ranges for Renaissance lute tablature, covering French/English, Italian/Spanish and German conventions.
- Added new ranges for fingering charts for flute, oboe, clarinet, bassoon, saxophone and recorder, as used in educational materials such as instructional or method books.
- Added Britten's curlew sign for a pause of an indeterminate length.
- Added push/pull signs for accordion.
- Added separate noteheads for white mensural notation.
- Added inverted signum congruentiae.
- Added combined tenuto-accent articulation.
- Added quasi-random wiggly lines (**wiggleRandom1**, **wiggleRandom2**, **wiggleRandom3**, **wiggleRandom4**) to multi-segment lines range.
- Added flipped and large versions of constant circular motion (**wiggleCircularConstantFlipped**, **wiggleCircularConstantLarge**, **wiggleCircularConstantFlippedLarge**) to multi-segment lines range.
- Added combining top/middle/bottom segments for black and white rectangular note clusters.
- Added 2, 3, 4 and 6-dot divisi indicators for measured tremolos (**tremoloDivisiDots2**, **tremoloDivisiDots3**, etc.) to tremolos range.
- Added clavichord bebung glyphs for 2, 3, and 4 finger movements (**keyboardBebung2DotsAbove**, **keyboardBebung3DotsBelow**, etc.) to the keyboard techniques range.
- Added double-height parentheses and brackets (**csymParensLeftTall**, **csymParensRightTall**, **csymBracketLeftTall**, **csymBracketRightTall**) to the chord symbols range.

- Added recommendation for stylistic alternates for time signature digits 0–9 suitable for use as large time signatures shown above/between staves (**timeSig0Large** through **timeSig9Large**).
- Added *sfp* (sforzato-piano) dynamic and ligature.
- Added Penderecki's quarter-flat and Busotti's three-quarter sharp accidentals.
- Added six further accordion coupler diagrams for right-hand three-rank accordions, and accordion ricochet glyphs.

About SMuFL

A brief history of music fonts

Computer software has been displaying musical symbols of various kinds since the 1960s, but the first font for musical symbols did not arrive until 1985, when Cleo Huggins designed Sonata for Adobe.¹

Sonata mapped the musical symbols onto keys on the standard QWERTY keyboard, using some simple mnemonics (the treble G clef, for example, was mapped onto the & key, and the sharp sign onto #). Most music fonts developed since then, including Steve Peha's Petrucci (the first music font for Finale, dating from 1988²) and Jonathan Finn's Opus (the first music font for Sibelius, dating from 1993), have followed Sonata's layout.

However, since Sonata includes fewer than 200 glyphs, and even conventional music notation³ requires many more symbols than that, individual vendors have devised their own mappings for glyphs beyond Sonata's initial set.

By 2013, for example, the Opus font family that is still Sibelius's default font set contains no fewer than 18 fonts with more than 600 glyphs between them.

In 1998, Perry Roland of the University of Virginia drafted a proposal for a new range of musical symbols to be incorporated into the Unicode Standard⁴. This range of 220 glyphs was duly accepted into the Unicode Standard, and those symbols are found at code points U+1D100–U+1D1FF⁵. However, its repertoire of 220 symbols does not extend dramatically beyond the scope of the original 1985 version of Sonata, though it does add symbols for mensural and Gregorian notation.

To date the only commercially available music font that uses the Unicode mapping is Adobe Sonata Std, and its repertoire is incomplete.

How SMuFL is organized

The aim of the Standard Music Font Layout (SMuFL) is to provide the basis for music font mapping for the age of Unicode and OpenType fonts.

SMuFL uses the standard Private Use Area in the Basic Multilingual Plane (starting at code point U+E000), and currently includes more than 1850 recommended glyphs, plus several hundred further optional but recommended glyphs, primarily ligatures (i.e. two

¹ See <http://www.identifont.com/show?12A>

² See <http://blog.finalemusic.com/post/2010/02/18/Meet-Steve-Peha-creator-of-Petrucci-Finales-first-music-font.aspx>

³ A term coined by Donald Byrd, Senior Scientist and Adjunct Associate Professor of Informatics at Indiana University.

⁴ The original proposal (<http://www.lib.virginia.edu/artsandmedia/dmmc/Music/UnicodeMusic/>) is no longer available, but an archived version can be found at <http://archive.is/PzkaT>

⁵ See <http://www.unicode.org/charts/PDF/U1D100.pdf>

or more symbols drawn as a single glyph) and stylistic alternates (i.e. a different appearance for the same glyph with equivalent meaning). SMuFL is a superset of the Unicode Musical Symbols range, and it is recommended that common glyphs are included both at code points in SMuFL and in the Unicode Musical Symbols range. In the tables of glyphs in this document, where glyphs are shared between SMuFL and the Unicode Musical Symbols range, the Unicode Musical Symbols code point is shown following the SMuFL code point.

The groupings of glyphs within SMuFL are based on the groupings defined by Perry Roland in the Unicode Musical Symbols range, but with finer granularity. There are currently 99 groups of glyphs, proceeding roughly in order from least to most idiomatic, i.e. specific to particular instruments, types of music, or historical periods. The grouping has no significance other than acting as an attempt to provide an overview of the included glyphs.

Room for future expansion has generally been left in each group, so code points are not contiguous. Until SMuFL reaches version 1.0, code points may also change between revisions to accommodate the insertion or deletion of individual glyphs and groups of glyphs. However, every glyph in SMuFL also has a canonical name, intended to be immutable, which makes it possible for software developers to minimize the impact of code points changing in the short term. Once SMuFL reaches version 1.0, the code points of existing glyphs will not change in future revisions.

Recommended and optional glyphs

One of the aims of SMuFL is to make it as simple as possible for developers both of fonts and of scoring software to implement support for a wide range of musical symbols. Although modern font technologies such as OpenType enable a great deal of sophistication in automatic substitution features⁶, applications that wish to use SMuFL-compliant fonts are not obliged to support advanced OpenType features.

The basic requirements for the use of SMuFL-compliant fonts are the ability to access glyphs by their Unicode code point, to measure glyphs, and to scale them (e.g. by drawing the font at different point sizes). If applications are able to access OpenType features such as stylistic sets and ligatures, then additional functionality may be enabled.

However, all glyphs that can be accessed via OpenType features are also accessible via an explicit code point. For example, a stylistic alternate for the sharp accidental designed to have a clearer appearance when reproduced at a small size can be

⁶ See http://www.adobe.com/devnet/opentype/afdko/topic_feature_file_syntax.html

accessed as a stylistic alternate for **accidentalSharp**, but also by way of its explicit code point, which will be in the range U+F400–U+F8FF.

Because optional glyphs for ligatures, stylistic alternates, etc. are not required, and different font developers may choose to provide different sets (e.g. several different appearances of tab clefs, or different sets of glyphs whose designs are optimized for drawing at different optical sizes), SMuFL does not make any specific recommendations for how these glyphs should be assigned explicit code points, except that they must be within the range U+F400–U+F8FF, which is reserved for this purpose and for any other private use required by font or application developers.

In summary, recommended glyphs are encoded from U+E000, with a nominal upper limit of U+F3FF (a total of 5120 possible glyphs), while optional glyphs (ligatures, stylistic alternates, etc.) are encoded from U+F400, with a nominal upper limit of U+F8FF (a total of 1280 possible glyphs).

In order for a font to be considered SMuFL-compliant, it should implement as many of the recommended glyphs as are appropriate for the intended use of the font, at the specified code points. Fonts need not implement every recommended glyph, and need not implement any optional glyphs, in order to be considered SMuFL-compliant.

Implementations

To date the only available font that implements SMuFL is Bravura, an OpenType font released under the SIL Open Font License that can be downloaded from the SMuFL web site at <http://www.smufl.org/fonts>.

The example glyphs in this document are all taken from Bravura.

Sources for symbols

In addition to surveying the music fonts supplied with Sibelius, Finale and other scoring applications, the following texts were consulted as sources for musical symbols:

- Agostini, Dante. *Methode de Batterie*. France: Carisch Musicom, 2009.
- Balestrieri, Donald. *Registers of the Standard Stradella Keyboard*. USA: Accord Magazine, 1979.⁷
- Doty, David B. *The Just Intonation Primer*. San Francisco, USA: The Just Intonation Network, 1993.
- Draugsvoll, Geir & Højsgaard, Erik (translated Borregaard, Andreas). *Handbook on Accordion Notation*. Copenhagen: The Royal Danish Academy of Music in Copenhagen, 2001.⁸

⁷ See <http://www.accordions.com/articles/stradella.aspx>

⁹ A summary of the main notations prescribed in this book can be found at <http://www.handbellworld.com/music/HandbellNotation.cfm>

Other contributors

Grateful thanks are also extended to the following, all of whom have contributed their time and expertise to identifying further sources of glyphs for inclusion in SMuFL: Mark Adler, Stephen Begley, Michael Scott Cuthbert, Maurizio Gavioli, Michael Good, Mark Johnson, Dave Keenan, Jean-Christoph Michel, Alexander Plötz, Ahmed Tahar, Emil Wojtacki, Werner Wolff.

Thanks also to Joe Berkovitz for his contribution towards the guidelines for font metrics and glyph registration for fonts intended for use with scoring applications, and the design of the font metadata JSON files.

Missing symbols?

If you know of any commonly used symbols that are not included in SMuFL, please post your suggestions to the smufl-discuss mailing list (see www.smufl.org/discuss).

License

Notes for implementers

This section provides guidelines and recommendations for metrics, glyph registration and font metadata, and is intended for font designers who want to design SMuFL-compliant fonts, and for software developers who want to build applications that can consume SMuFL-compliant fonts.

Glyph and class names

To aid software developers in implementing SMuFL-compliant fonts, two support files in JSON format are available, one providing a mapping between code point and canonical glyph name, and the other providing a list of similar glyphs grouped into classes, i.e. groups of glyphs that should be handled in a similar way in software applications (e.g. noteheads, clefs, flags, etc.).

For more information about the JSON format, see www.json.org.

It is strongly recommended that software developers should refer to specific glyphs within SMuFL by name rather than by Unicode code point. While SMuFL is still under active development, it cannot be guaranteed that code points will remain unchanged from one revision to the next, whereas every effort will be made to keep glyph names consistent between revisions.

glyphnames.json is the file that maps code points to glyph names, which by convention use lower camel case, a convenient format for most programming languages. Here is an excerpt of this file:

```
{
  ...
  "barlineDashed": {
    "alternateCodepoint": "U+1D104",
    "codepoint": "U+E036"
  },
  "barlineDotted": {
    "codepoint": "U+E037"
  },
  "barlineDouble": {
    "alternateCodepoint": "U+1D101",
    "codepoint": "U+E031"
  },
  "barlineFinal": {
    "alternateCodepoint": "U+1D102",
    "codepoint": "U+E032"
  },
  "barlineHeavy": {
    "codepoint": "U+E034"
  },
  ...
}
```

```
}
```

The file is keyed using the glyph names, with the SMuFL code point provided as the value for the "codepoint" key, and the Unicode Musical Symbols range code point (if applicable) provided as the value for the "alternateCodepoint" key.

classes.json is the file that groups glyphs together into classes, so that software developers can handle similar glyphs in a similar fashion. Here is an excerpt of this file:

```
{
  "clefs": [
    "gClef",
    "gClef15mb",
    "gClef8vb",
    "gClef8va",
    "gClef15ma",
    "gClef8vbOld",
    "gClef8vbCclef",
    ...
  ],
  "noteheads": [
    "noteheadDoubleWhole",
    "noteheadWhole",
    "noteheadHalf",
    "noteheadBlack",
    "noteheadNull",
    ...
  ],
  "flags": [
    "flag8thUp",
    "flag8thDown",
    "flag16thUp",
    "flag16thDown",
    "flag32ndUp",
    "flag32ndDown",
    ...
  ],
  ...
}
```

Glyphs are listed within their classes using the names specified in **glyphnames.json**. Not all glyphs are contained within classes, and the same glyph can theoretically appear in multiple classes (though, as of the current version, none do).

The current versions of **glyphnames.json** and **classes.json** are available for download at www.smufl.org/download.

In addition to the glyph names and classes JSON files, it is recommended that SMuFL-compliant fonts also contain font-specific metadata JSON files, which are described below.

Designing for scoring applications and text-based applications

In addition to providing a standard approach to how musical symbols should be assigned to Unicode code points, SMuFL also aims to provide two sets of guidelines for the metrics and glyph registration, addressing the two most common use cases for fonts that contain musical symbols, i.e. use within dedicated scoring applications, and use within text-based applications (such as a word processors, desktop publishers, web pages, etc.).

Since it is helpful for scoring applications that all symbols in a font be scaled relative to each other as if drawn on a staff of a particular size, and conversely it is helpful for musical symbols to be drawn in-line with text to be scaled relative to the letterforms with which the musical symbols are paired, in general a single font cannot address these two use cases: the required metrics and relative scaling of glyphs are incompatible¹⁰.

Therefore, it is recommended that font developers make clear whether a given font is intended for use by scoring applications or by text-based applications by appending "Text" to the name of the font intended for text-based applications; for example, "Bravura" is intended for use by scoring applications, and "Bravura Text" is intended for use by text-based applications (or indeed for mixing musical symbols with free text within a scoring application).

Metrics and glyph registration for scoring applications

The following guidelines are provided for fonts intended for use in scoring applications:

- Dividing the em in four provides an analogue for a five-line staff: if a font uses 1000 upm (design units per em), as is conventional for a PostScript font, one staff space is equal to 250 design units; if a font uses 2048 upm, as is conventional for a TrueType font, one staff space is equal to 512 design units.
- The origin (bottom left corner of the em square, i.e. $x = 0$ and $y = 0$ in font design space) therefore represents the middle of the bottom staff line of a nominal five-line staff, and $y = 1$ em represents the middle of the top staff line of that same five-line staff.

¹⁰ The main problem concerns line spacing: because most applications determine the line spacing required for a font based on a sum of the ascender, descender and line gap values in the font (for which different applications on different operating systems use different combinations of the three places this can be defined, once the `hhea` table and twice in the `OS/2` table), it is impractical to provide a font where all glyphs are scaled correctly relatively to another in such a way that all musical symbols can be drawn at a single scale factor that complements text fonts at the same point size. Many applications clip glyphs that exceed the calculated line spacing, so in order to have a single font in which e.g. a G clef is drawn without clipping and an eighth note is drawn at a corresponding scale factor (such that the clef is around twice as tall as the note), the line spacing would have to be so tall that it would greatly distort the line spacing of the text. For more information about this issue, see <http://typophile.com/node/13081>. Bravura, for what it's worth, uses very large line spacing (1.75 times its em square), such that 99% of glyphs are drawn without clipping in text-based applications, at the expense of making it practical to use the font mixed in-line with text.

- All glyphs should be drawn at a scale consistent with the key measurement that one staff space = 0.25 em.
- Unless otherwise stated, all glyphs shall be horizontally registered so that their leftmost point coincides with $x = 0$.
- Unless otherwise stated, all glyphs shall have zero-width side bearings, i.e. no blank space to the left or right of the glyph.
- Glyphs that apply to a staff as a whole (e.g. barlines) shall be registered such that the font baseline lies at the nominal vertical position of the bottom line of a five-line staff. If the glyph is specific to a staff other than a regular five-line staff, then for registration purposes that staff's vertical center shall be exactly aligned with the vertical center of a five-line staff.
- Glyphs for movable notations that apply to some vertical staff position (e.g. note heads, accidentals) shall be registered such that the font baseline lies exactly at that position. For example, a typical notehead or accidental glyph is registered such that it is vertically centered on the baseline.
- Clefs should be positioned such that the pitch the clef refers to is on the baseline (e.g. the F clef is placed such that the upper dot is above and the lower dot below the baseline). If a clef does not refer specifically to a pitch, its $y=0$ should coincide with the center staff line on a five-line staff, or the visual center for staves with more or fewer than five lines (e.g. tablature staves).
- Noteheads should be positioned as if on the bottom line of the staff (except for complete clusters representing intervals of a second or third, which should be positioned as if in the bottom space of the staff).
- Pre-composed stems should be positioned as if they are pointing upwards and attached to a notehead on the bottom line of the staff. The center of the stem should be at $x=0$.
- Combining glyphs that are designed to be superimposed on stems (stem decorations) should be registered such that the point that should sit in the center of the stem (i.e. typically the visual center of the symbol) should be at $x=0$ and $y=0$.
- Accidentals should be positioned as if they apply to a notehead on the bottom line of the staff.
- Pre-composed notes should be positioned as if on the bottom line of the staff.
- Flags are positioned such that $y=0$ corresponds to the end of a stem of normal length, and such that $x=0$ corresponds to the left-hand side of the stem.

- Rests are relative to an imaginary staff position, typographically speaking (usually the center line of a five-line staff in which the rest assumes its default position). The font baseline should represent this staff position, with the exception of the whole note (semibreve) rest, which should hang from the font baseline.
- Bracket ends are positioned such that the point at which they connect to the top or bottom of a vertical bracket is at $y=0$.
- Letters for dynamics (and for D.C./D.S. in the repeats range) should be scaled such that the caps height is around 0.5 em, and the x-height is around 0.25 em.
- Digits for time signatures should be scaled such that each digit is two staff spaces tall, i.e. 0.5 em, and vertically centered on the baseline. Although some glyphs in the time signatures range (such as the large + sign, common and cut time glyphs, etc.) apply to the whole staff, these should likewise be vertically centered on the baseline.

Many of these guidelines are based on the conventions established by Adobe's Sonata font and carried through by most other fonts designed for use in scoring applications, for the sake of making it as easy as possible for font and application developers to transition their existing fonts and software to supporting SMuFL-compliant fonts.

Metadata for SMuFL-compliant fonts

To help software developers integrate SMuFL-compliant fonts, it is recommended that font designers provide a font-specific metadata file, in JSON format, in the distribution package for their fonts.

The metadata file allows the designer to provide information that cannot easily (or in some cases at all) be encoded within or retrieved from the font software itself, including recommendations for how to draw the elements of music notation not provided directly by the font itself (such as staff lines, barlines, hairpins, etc.) in a manner complementary to the design of the font, and important glyph-specific metrics, such as the precise coordinates at which a stem should connect to a notehead.

Glyph names may be supplied either using their Unicode code point or their canonical glyph name (as defined in the **glyphnames.json** file – see above). Measurements are specified in staff spaces, using floating point numbers to any desired level of precision.

The following key/value pairs are mandatory:

Key name	Description
"fontName"	The name of the font to which the metadata applies
"fontVersion"	The version number of the font to which the metadata applies

All other key/value pairs are optional. The "engravingDefaults" structure contains key/value pairs defining recommended defaults for line widths etc., as follows, with all measurements expressed in staff spaces:

Key name	Description
"staffLineThickness"	The thickness of each staff line
"stemThickness"	The thickness of a stem
"beamThickness"	The thickness of a beam
"beamSpacing"	The distance between the inner edge of the primary and outer edge of subsequent secondary beams
"legerLineThickness"	The thickness of a leger line (normally somewhat thicker than a staff line)
"legerLineExtension"	The amount by which a leger line should extend either side of a notehead
"slurEndpointThickness"	The thickness of the end of a slur
"slurMidpointThickness"	The thickness of the mid-point of a slur (i.e. its thickest point)
"tieEndpointThickness"	The thickness of the end of a tie
"tieMidpointThickness"	The thickness of the mid-point of a tie
"thinBarlineThickness"	The thickness of a thin barline, e.g. a normal barline, or each of the lines of a double barline
"thickBarlineThickness"	The thickness of a thick barline, e.g. in a final barline or a repeat barline
"dashedBarlineThickness"	The thickness of a dashed barline
"dashedBarlineDashLength"	The length of the dashes to be used in a dashed barline
"dashedBarlineGapLength"	The length of the gap between dashes in a dashed barline
"barlineSeparation"	The default distance between multiple barlines when locked together, e.g. between two thin barlines making a double barline, or a thin and a thick barline making a final barline, measured from the right-hand edge of the left barline to the left-hand edge of the right barline.
"repeatBarlineDotSeparation"	The default horizontal distance between the dots and the inner barline of a repeat barline, measured from the edge of the dots to the edge of the barline.
"bracketThickness"	The thickness of the vertical line of a bracket grouping staves together
"subBracketThickness"	The thickness of the vertical line of a sub-bracket grouping staves belonging to the same instrument together
"hairpinThickness"	The thickness of a <i>crescendo/diminuendo</i> hairpin

Key name	Description
"octaveLineThickness"	The thickness of the dashed line used for an octave line
"pedalLineThickness"	The thickness of the line used for piano pedaling
"repeatEndingLineThickness"	The thickness of the brackets drawn to indicate repeat endings
"arrowShaftThickness"	The thickness of the line used for the shaft of an arrow
"lyricLineThickness"	The thickness of the lyric extension line to indicate a melisma in vocal music
"textEnclosureThickness"	The thickness of a box drawn around text instructions (e.g. rehearsal marks)
"tupletBracketThickness"	The thickness of the brackets drawn either side of tuplet numbers

The "glyphs" structure contains a structure for each glyph for which metadata is supplied, with the canonical glyph name or its Unicode code point as the key. Each glyph may define any of the following key/value pairs:

Key name	Description
"stemUpSE"	The exact position at which the bottom right-hand (south-east) corner of an upward-pointing stem rectangle should start, relative to the glyph origin, expressed as Cartesian coordinates in staff spaces.
"stemDownNW"	The exact position at which the top left-hand (north-west) corner of a downward-pointing stem rectangle should start, relative to the glyph origin, expressed as Cartesian coordinates in staff spaces.
"stemUpNW"	The amount by which an up-stem should be lengthened from its nominal unmodified length in order to ensure a good connection with a flag, in spaces. ¹¹
"stemDownSW"	The amount by which a down-stem should be lengthened from its nominal unmodified length in order to ensure a good connection with a flag, in spaces.
"nominalWidth"	The width in staff spaces of a given glyph that should be used for e.g. positioning leger lines correctly. ¹²

¹¹ It is typical for noteheads and flags to be drawn using font glyphs, while stems themselves are drawn using primitive lines or rectangles. Flag glyphs in SMuFL-compliant fonts are registered such that y=0 represents the end of a stem drawn at its normal length, i.e. typically 3.5 staff spaces, so for simple drawing, any flag can be drawn at the same position relative to the stem and give the correct visual stem length. Modern drawing APIs typically provide sub-pixel RGB anti-aliasing for font glyphs, but may only provide grayscale anti-aliasing for primitive shapes. If the stem is drawn at its normal length with a flag glyph continuing beyond the end of the stem, there may be a poor visual appearance resulting from the primitive stem using standard anti-aliasing and the flag glyph using sub-pixel anti-aliasing. Therefore, it is recommended to extend the stem by the additional height of the flag such that the primitive stem stops at the end (or just short of the end) of the flag. Because the amount by which the stem should be extended is highly dependent on the design of the flag in a particular font, this value should be specified for each flag glyph in the metadata JSON file.

¹² Certain fonts, for example those that mimic music calligraphy, may include glyphs that are asymmetric by design, and where a simple calculation of the glyph's bounding box will not provide the correct result for registering that glyph with other primitives. For example, a

Key name	Description
"numeralTop"	The position in staff spaces that should be used to position numerals relative to clefs with ligated numbers where those numbers hang from the bottom of the clef, corresponding horizontally to the center of the numeral's bounding box.
"numeralBottom"	The position in staff spaces that should be used to position numerals relative to clefs with ligatured numbers where those numbers sit on the baseline or at the north-east corner of the G clef, corresponding horizontally to the center of the numeral's bounding box.

Below is an excerpt of a dummy font metadata file for the Bravura font, with some of the "engravingDefaults" and "glyphs" structures filled in:

```
{
  "fontName" : "Bravura",
  "fontVersion": "0.8",

  "engravingDefaults": {
    "staffLineThickness": 0.1,
    "stemThickness": 0.1,
    "beamThickness": 0.5,
    "beamSpacing": 0.25,
    "legerLineThickness": 0.2,
    "legerLineExtension": 0.2,
    ...
  },
  "glyphs": {
    "noteheadBlack": {
      "stemDownNW": [
        0.0,
        -0.184
      ],
      "stemUpSE": [
        1.328,
        0.184
      ]
    },
    ...
  }
}
```

Example of glyph registration for notes with flags

The figure below shows how font-specific metadata may be used in conjunction with the conventions of glyph registration to construct two notes: an up-stem 16th note (semiquaver), and a down-stem 32nd (demisemiquaver).

whole rest may be slightly oblique if mimicking a chisel nib pen, and for precise registration it may be necessary to specify its width independent of the glyph's actual bounding box.

- The horizontal grey lines denote staff lines, for scale.
- The light blue boxes show glyph bounding boxes, with the left-hand side of the box corresponding to $x=0$, while the horizontal lines bisecting the blue boxes show the origin for each glyph, i.e. $y=0$.
- The red boxes show the locations of the glyph attachment points, as specified in the font metadata JSON file.
- The shaded area on the down-stem note shows the amount by which a stem of standard length (i.e. the unfilled portion of the stem) should be extended in order to ensure good on-screen appearance at all zoom levels.

Note that the **stemUpSE** attachment point corresponds to the bottom right-hand (or south-east) corner of the stem, while **stemDownNW** corresponds to the top left-hand (or north-west) corner of the stem. Likewise, for correct alignment, the flag glyphs must always be aligned precisely to the left-hand side of the stem, with the glyph origin positioned vertically at the end of the normal stem length.

Metrics and glyph registration for text-based applications

Work on these guidelines for metrics and glyph registration is ongoing.

Staff brackets (U+E000–U+E00F)

	U+E000 (and U+1D114)		U+E001
{	<i>brace</i>	}	<i>reversedBrace</i>
	Brace		Reversed brace
{	U+E002 (and U+1D115))	U+E003
	<i>bracket</i>		<i>bracketTop</i>
	Bracket		Bracket top
)	U+E004)	U+E005
	<i>bracketBottom</i>		<i>reversedBracketTop</i>
	Bracket bottom		Reversed bracket top
)	U+E006	=	U+E007
	<i>reversedBracketBottom</i>		<i>systemDivider</i>
	Reversed bracket bottom		System divider
=	U+E008	=	U+E009
	<i>systemDividerLong</i>		<i>systemDividerExtraLong</i>
	Long system divider		Extra long system divider
=	U+E00A		
	<i>splitBarDivider</i>		
	Split bar divider (bar spans a system break)		

Implementation notes

The **brace** glyph should be scaled vertically in a scoring application to the appropriate height of the two or more staves it encompasses.

bracket is a complete bracket of a fixed height useful for displaying brackets in text-based documents or applications.

To display a bracket of variable height in a scoring application, use **bracketTop** and **bracketBottom** as the top and bottom terminals of a bracket drawn using a stroked line or filled rectangle of the appropriate width.

Staves (U+E010–U+E02F)

U+E010 (and U+1D116)	U+E011 (and U+1D117)
— <i>staff1Line</i> 1-line staff	— <i>staff2Lines</i> 2-line staff
☰ U+E012 (and U+1D118) <i>staff3Lines</i> 3-line staff	☰ U+E013 (and U+1D119) <i>staff4Lines</i> 4-line staff
☰ U+E014 (and U+1D11A) <i>staff5Lines</i> 5-line staff	☰ U+E015 (and U+1D11B) <i>staff6Lines</i> 6-line staff
— U+E016 <i>staff1LineWide</i> 1-line staff (wide)	— U+E017 <i>staff2LinesWide</i> 2-line staff (wide)
☰ U+E018 <i>staff3LinesWide</i> 3-line staff (wide)	☰ U+E019 <i>staff4LinesWide</i> 4-line staff (wide)
☰ U+E01A <i>staff5LinesWide</i> 5-line staff (wide)	☰ U+E01B <i>staff6LinesWide</i> 6-line staff (wide)
— U+E01C <i>staff1LineNarrow</i> 1-line staff (narrow)	— U+E01D <i>staff2LinesNarrow</i> 2-line staff (narrow)
☰ U+E01E <i>staff3LinesNarrow</i> 3-line staff (narrow)	☰ U+E01F <i>staff4LinesNarrow</i> 4-line staff (narrow)
☰ U+E020 <i>staff5LinesNarrow</i> 5-line staff (narrow)	☰ U+E021 <i>staff6LinesNarrow</i> 6-line staff (narrow)

Implementation notes

Scoring programs should draw their own staff lines using primitives, not use the glyphs in this range.

Narrow and wide versions are provided for use in fonts intended for use in text-based applications. These glyphs should be zero-width in such fonts.

Barlines (U+E030–U+E03F)

U+E030 (and U+1D100)		U+E031 (and U+1D101)
<i>barlineSingle</i>		<i>barlineDouble</i>
Single barline		Double barline
U+E032 (and U+1D102)		U+E033 (and U+1D103)
<i>barlineFinal</i>		<i>barlineReverseFinal</i>
Final barline		Reverse final barline
U+E034		U+E035
<i>barlineHeavy</i>		<i>barlineHeavyHeavy</i>
Heavy barline		Heavy double barline
U+E036 (and U+1D104)		U+E037
<i>barlineDashed</i>		<i>barlineDotted</i>
Dashed barline		Dotted barline
U+E038 (and U+1D105)		U+E039
<i>barlineShort</i>		<i>barlineTick</i>
Short barline		Tick barline

Implementation notes

Scoring programs should draw their own barlines using primitives, not use the glyphs in this range.

Repeats (U+E040–U+E04F)

	U+E040 (and U+1D106)		U+E041 (and U+1D107)
:	<i>leftRepeat</i> Left repeat sign	:	<i>rightRepeat</i> Right repeat sign
:	U+E042 (and U+1D108)	.	U+E043
	<i>repeatDots</i> Repeat dots		<i>repeatDot</i> Single repeat dot
D.S.	U+E044 (and U+1D109)	D.C.	U+E045 (and U+1D10A)
	<i>dalSegno</i> Dal segno		<i>daCapo</i> Da capo
§	U+E046 (and U+1D10B)	⊕	U+E047 (and U+1D10C)

repeatLeftRight

Left and right repeat signs

Implementation notes

Scoring programs should draw their own repeat barlines using primitives to draw the thick and thin lines and **repeatDots** to draw the dots, not use the precomposed glyphs **leftRepeat** or **rightRepeat**.

dalSegno and **daCapo** are provided for compatibility with the Unicode Musical Symbols range. Scoring applications should allow the user to specify the appearance of the *da capo* and *dal segno* instructions using any regular text font.

Implementation notes

Scoring applications may choose to create e.g. *ottava alta* and *ottava bassa* versions of the G clef and F clef by combining **gClef** and **fClef** with **ottava** and **quindicesima** rather than using the precomposed glyphs.

The basic G clef, F clef and C clef symbols can be positioned at different vertical positions relative to the staff as required (e.g. the C clef can be positioned to create an alto or tenor clef).

---	---

Implementation notes

timeSigCombNumerator and **timeSigCombDenominator** are control characters designed to be combined with the time signature digits (by way of glyph substitution, such as OpenType ligatures) to shift them vertically into position suitable for drawing as the numerator and denominator of a time signature. These control characters are intended for fonts to be used in text-based applications, since scoring applications should position the numerator and denominator of time signatures independently.

$$\begin{matrix} \text{♪} = \bullet + \text{○} | + \text{○} \\ 1D164 \quad 1D158 \quad 1D165 \quad 1D172 \end{matrix}$$

$$\begin{matrix} \text{♪} = \bullet + \text{○} | + \text{○} \\ 1D161 \quad 1D158 \quad 1D165 \quad 1D16F \end{matrix}$$

Scoring applications should draw stems using primitives, rather than using **stem** (i.e. U+1D165 as shown in the above image¹³), so that they can be drawn to the correct length.

Implementation notes

Scoring applications should draw simple note clusters (e.g.

noteheadClusterSquareWhite, **noteheadClusterRoundBlack**) directly using primitives rather than using these glyphs, so that the clusters can be drawn spanning the correct interval.

The combining glyphs for note clusters are designed to allow the creation of clusters of any size, with a scoring application inserting the appropriate number of “middle” segments between a single instance of the “top” and “bottom” segments:

The left-hand cluster is a stack (top to bottom) of 1 x **noteheadClusterHalfTop**, 3 x **noteheadClusterHalfMiddle**, 1 x **noteheadClusterHalfBottom**; the right-hand cluster is 1 x **noteheadDiamondClusterBlackTop**, 2 x **noteheadDiamondClusterBlackMiddle**, 1 x **noteheadDiamondClusterBlackBottom**.

See also the implementation notes for noteheads.

Implementation notes

These noteheads are designed for use by scoring applications to render music where the names of notes are shown inside noteheads. For practical use, scoring applications should provide a means of automatically substituting regular noteheads for the appropriate note name notehead glyph according to the pitch of each note.

See also the implementation notes for noteheads.

uniE1B0.salt01		<i>noteDoubleWholeAlt</i> Double whole note (breve), single vertical strokes
-----------------------	---	---

Implementation notes

This range is most useful in fonts intended for text-based applications, with metrics that are compatible for mixing musical symbols with text.

In such a font, the precomposed note glyphs may be used for displaying metronome marks and simple metric modulations. More complex metric modulations and *l'istesso tempo* directions may be drawn using these glyphs in conjunction with the **Beamed groups of notes** range.

Scoring applications should draw all notes by combining notehead glyphs — e.g. **noteheadBlack** for quarter notes (crotchets) and shorter notes, **noteheadHalf** for half notes (minims) — with stems drawn using primitives.

Implementation notes

The glyphs shown here may be combined with noteheads to produce precomposed glyphs with a fixed stem length.

Scoring applications should produce this effect by imposing the required symbol on a stem drawn using a primitive line, rather than using these precomposed stem glyphs:

- Sprechgesang (**vocalSprechgesang**)
- Swish (**miscSwish**)
- Penderecki unmeasured tremolo (**pendereckiTremolo**)
- Sul ponticello (**stringsBowBehindBridge**)
- Bow on bridge (**stringsBowOnBridge**)
- Bow on tailpiece (**stringsBowOnTailpiece**)
- Buzz roll (**buzzRoll**)
- Damp (**pluckedDamp**)
- Vibrato pulse accent (**stringsVibratoPulse**)
- Multiphonics (**windMultiphonicsBlackStem**, **windMultiphonicsWhiteStem**,
windMultiphonicsBlackWhiteStem)
- Sussurando (**vocalsSussurando**)
- Rim shot (**pictRimShotOnStem**)
- Harp string noise (**harpStringNoiseStem**)

U+E210	U+E211
<i>tremoloDivisiDots4</i>	<i>tremoloDivisiDots6</i>
··· Divide measured tremolo by 4	··· Divide measured tremolo by 6

Implementation notes

Scoring applications may simply use multiple instances of **tremolo1** imposed on note stems to draw one-note tremolos with different numbers of slashes.

The fingered tremolo glyphs are for two-note tremolos. Scoring applications should draw two-note tremolos using the same primitives used for drawing beams, rather than using these glyphs.

Implementation notes

Scoring applications may create groups of flags for notes shorter than 16th notes (semiquavers) by combining **flag16thUp** with the required number of **flagInternalUp** for stem up notes, or **flag16thDown** with the required number of **flagInternalDown** for stem down notes, stacking **flagInternalUp** above or **flagInternalDown** below respectively, ensuring even spacing.

The set of stylistic alternates for shorter flags may be substituted by a scoring application in the case of a dotted note with an upward stem, to avoid collisions between the augmentation dot and the flag.

Implementation notes

These accidentals were not actually proposed by Richard Stein or Bernd Zimmermann, but are instead logical extensions of their symbols adding arrows to provide options for notating slight pitch modifications¹⁴.

¹⁴ Gould, *ibid.*, page 96 acknowledges the Stein-Zimmermann accidentals as the most commonly-used symbols with fixed meanings; however, the extensions provided here do not have fixed meanings.

Implementation notes

It is not necessary to implement the complete Sagittal microtonal notation system. The Spartan set is sufficient to notate 13-limit just intonation (JI), 1/12-tones, 50 common equal divisions of the octave (EDOs), and their related linear temperaments.

The eight pairs of single-shaft accidentals above are sufficient to provide these capabilities when used alone, and to the left of the standard double-flat, flat, sharp and large double-sharp (**accidentalDoubleFlat**, **accidentalFlat**, **accidentalSharp**, **accidentalLargeDoubleSharp**). This is called “mixed Sagittal.”

As an alternative, the following group (the multi-shaft Spartans) provides a complete set of stand-alone accidentals to replace each of the above combinations of a single-shaft Sagittal with a standard accidental. This is called “pure Sagittal.” The standard natural (**accidentalNatural**) is used alone in both mixed and pure variants, but only to cancel a previous accidental.

Sagittal accidentals are not intended to be combined with one another, inasmuch as symbols representing useful combinations and powers of primes are already provided. An accidental can often be used to represent alternative commas that differ by 2 cents or less. In such cases the intended comma ratio may be determined by the note to which it is applied, or by the musical context. Alternatively, diacritics (from the Herculean and subsequent extensions) may be added to distinguish these commas. Commas which require diacritics for exact representation are preceded by a tilde “~” in the glyph descriptions.

Sagittal extensions following Spartan allow notation of JI ratios with primes beyond 13, and more combinations of lower primes, as well as finer tone-fractions, degrees of larger EDOs, and more complex temperaments, all with single Sagittal accidentals. The same choice of mixed versus pure is available with each extension. See <http://sagittal.org> for more information.

Other Sagittal-compatible accidentals are Stein’s half-sharp and one-and-a-half-sharps (**accidentalQuarterToneSharp4** and **accidentalThreeQuarterTonesSharp2**) which may be substituted for **accSagittal11MediumDiesisUp** and **accSagittalSharp11MUp**; the **accidentalNarrowReversedFlat** and **accidentalNarrowReversedFlatAndFlat** which may be substituted for **accSagittal11MediumDiesisDown** and **accSagittalFlat11MDown**; and the **accidentalWilsonPlus** and **accidentalWilsonMinus** which may be substituted for the **accSagittal5CommaUp** and **accSagittal5CommaDown**.

Implementation notes

The Trojan (or tone-fraction) set is not strictly-speaking an extension of Athenian, as there are a few Athenians (including Spartans) that are not Trojan. Those are the glyphs whose descriptions include "5:7k", "7:11k", "5:11S", "25S" or "11L" and do not include a tone-fraction.

The descriptions below the Sagittal glyphs do not include all possible uses, only a selection of the most common. To determine which of these glyphs to use for tone-fractions not listed here (as well as for JI ratios and degrees of EDOs that are not listed here) please see <http://sagittal.org>.

Herculean Sagittal extension (very high precision) accidental diacritics (U+E3E0–U+E3EF)

U+E3E0	U+E3E1
<i>accSagittalShaftUp</i>	<i>accSagittalShaftDown</i>
Shaft up (natural for use with only diacritics up)	Shaft down (natural for use with only diacritics down)
U+E3E2	U+E3E3
<i>accSagittalAcute</i>	<i>accSagittalGrave</i>
' Acute 5 schisma up (5s) 2 cents up	' Grave 5 schisma down 2 cents down

Implementation notes

Sagittal diacritics are placed to the left of Sagittal accidentals if required; at most one diacritic from each group. If there are multiple diacritics, those representing the larger alteration are placed closer to the accidental. If diacritics are directly altering the natural note, they should be placed to the left of, but not touching, one of the bare-shaft glyphs (**accSagittalShaftUp** or **accSagittalShaftDown**); whichever one represents the direction of the sum of the diacritic alterations.

Olympian Sagittal extension (extreme precision) accidental diacritics (U+E3F0–U+E3FF)

Reserved for future use.

Implementation notes

This range is reserved for the future definition of four glyphs, representing alterations of one and two 455 or 65:77 schisminas. These schisminas are approximately 0.4 cents.

Magrathean Sagittal extension (insane precision) accidental diacritics (U+E400–U+E40F)

Reserved for future use.

Implementation notes

This range is reserved for the future definition of 38 glyphs, representing alterations of a half to nine-and-a-half tinas. A tina is approximately 0.14 cents.

Implementation notes

Scoring applications should draw multiple measure rests using primitives to provide variable width and line thickness rather than using **restHBar**.

“Old style” multiple measure rests can be created by laying out **restLonga** (four bars), **restDoubleWhole** (two bars) and **restWhole** (one bar) next to each other.

For dotted rests, the augmentation dot glyph **augmentationDot** should be used.

◦	U+E510 <i>dynamicNienteForHairpin</i> Niente (for hairpins)		

Implementation notes

Scoring applications should draw crescendo and diminuendo hairpins using primitives rather than **dynamicCrescendoHairpin** and **dynamicDiminuendoHairpin** in order to provide variable width, line thickness, angle and aperture.

Ligatures should be defined for common combinations of dynamics, such as **mp**. Special attention should be paid to kerning pairs for these glyphs.

Scoring applications may choose to draw dynamics either using multiple glyphs (e.g. 3 x **dynamicForte** for ***fff***) or using the pre-composed glyph (e.g. 1 x **dynamicFFF** for ***fff***).

uniE527_uniE242	
 <i>ornamentTurnSharpBelow</i>	
Turn, sharp below	

Implementation notes

Scoring applications should draw grace notes in the same way as they draw regular notes, rather than using the precomposed glyphs.

Likewise, scoring applications should draw *glissandi* using multiple instances of a wiggly line segment (e.g. **wiggleGlissando**), not the precomposed glyphs, to provide variable length and angle.

	Glissando down	Schleifer (long mordent)

Implementation notes

There is little agreement over the meaning, or indeed the naming, of ornaments beyond those that have survived into modern usage. The glyphs included in this range are the shapes that are used by a wide variety of composers, particularly in the baroque period. For information about the uses and interpretations of individual symbols in this range, consult Neumann (*ibid.*).

Implementation notes

When designing the Unicode Musical Symbols range, Perry Roland elected to develop a scheme for creating complex ornaments using a series of glyphs rather than defining precomposed glyphs for every ornament, as shown below:¹⁵

¹⁵ *Ibid.*, Allen, page 539.

~~	1D19C STROKE-2 + 1D19D STROKE-3 + 1D19E STROKE-4

This range expands upon the repertoire of 11 strokes in the Unicode Musical Symbols range.

The side-bearings for the glyphs in this range must be adjusted carefully to ensure correct positioning. (Kerning pairs may also be used.)

Glyphs between **ornamentTopLeftConcaveStroke** and **ornamentBottomLeftConvexStroke** are designed to be positioned immediately to the left of and to join seamlessly to **ornamentZigZagLineNoRightEnd**. **ornamentZigZagLineWithRightEnd** and glyphs between **ornamentTopRightConcaveStroke** and **ornamentBottomRightConvexStroke** are designed to be positioned immediately to the right of and to join seamlessly to **ornamentZigZagLineNoRightEnd**. **ornamentMiddleVerticalStroke** should be used immediately to the left of either **ornamentZigZagLineNoRightEnd** or **ornamentZigZagLineWithRightEnd** to provide correct positioning of the vertical stroke across the zig-zag line.

Precomposed trills and mordents (U+E570–U+E57F)

	<i>csymBracketLeftTall</i>
]	Double-height left bracket
	<b>U+E7E8</b>
<i>csymBracketRightTall</i>	
Double-height right bracket	

## Implementation notes

These symbols are designed to combine with accidental symbols (**accidentalSharp** and **accidentalFlat**) from the music font and the letters A–G (for root and bass alterations), lower case letters (for chord qualities, e.g. “maj” and “min”) and numbers (for chord extensions or tensions) from any standard text font to produce complete chord symbols.

Scoring applications should be able to create strings with complex formatting, e.g. superscript and subscript characters, small digits stacked on top of each other, and scale these symbols to any arbitrary size in order to produce satisfactory chord symbols with a wide variety of visual appearances.

# Tuplets (U+E7F0–U+E7FF)

	Tuplet colon		

## Implementation notes

This range provides glyphs for tuplet numbers. These digits may also be used in ligatures with clefs to indicate the interval by which a transposing instrument transposes, used in some scores in C.

Scoring applications should use primitives to draw tuplet brackets.

Simple triplets (including brackets) can be written in fonts intended for use in text-based applications using the glyphs in the **Beamed groups of notes** range.

End phrase

## Implementation notes

These are format characters as defined in the Unicode Standard¹⁶:

Extensive ligature-like beams are used frequently in musical notation between groups of notes having short values. The practice is widespread and very predictable, so it is therefore amenable to algorithmic handling. The format characters U+1D173 musical symbol begin beam and U+1D174 musical symbol end beam can be used to indicate the extents of beam groupings. In some exceptional cases, beams are left unclosed on one end. This status can be indicated with a U+1D159 musical symbol null notehead character if no stem is to appear at the end of the beam.

Similarly, format characters have been provided for other connecting structures. The characters U+1D175 musical symbol begin tie, U+1D176 musical symbol end tie, U+1D177 musical symbol begin slur, U+1D178 musical symbol end slur, U+1D179 musical symbol begin phrase, and U+1D17A musical symbol end phrase indicate the extent of these features. Like beaming, these features are easily handled in an algorithmic fashion.

These pairs of characters modify the layout and grouping of notes and phrases in full musical notation. When musical examples are written or rendered in plain text without special software, the start/end format characters may be rendered as brackets or left uninterpreted. To the extent possible, more sophisticated software that renders musical examples inline with natural-language text might interpret them in their actual format control capacity, rendering slurs, beams, and so forth, as appropriate.

Scoring applications may choose to implement these format characters for beams, slurs, phrase marks and ties or not, as they wish.

## Implementation notes

To produce ligatures of three or more notes, some of the glyphs in this range have to be combined.

Glyphs should be positioned relative to their starting pitch: for example, the **chantPorrectus3rd** glyph, which describes a downwards progression by an interval of a third, should be positioned on the staff line or space of the starting note of the downwards pattern; the connecting lines (e.g. **chantConnectingLineAsc3rd**) should likewise be positioned on the staff line or space corresponding to the bottom of the line; for an ascending liquescent, position **chantLiquescentAscLower** on the starting staff position, and **chantLiquescentAscUpper** on the ending staff position, with the appropriate length of connecting line between them, starting one staff position above the starting staff position (so describing an interval one staff position smaller than the distance between the lower and upper notes of the liquescent).

Scoring applications should position these glyphs like any other notehead, i.e. moving them vertically according to the desired starting staff position. Fonts intended for use in text-based applications should include glyphs that present these symbols at different staff positions, and a means to easily choose between them; one possible implementation would be to define OpenType ligatures of each of the glyphs in the **Combining staff positions** range with each of the glyphs in this range.

The table below shows how to produce some common ligatures, and describes which glyphs should be used; glyphs whose names appear in parentheses are control characters that move the following glyph vertically to a different staff position, as might be used in a font that employs OpenType ligatures.

Salicus: **chantPunctum** + (**staffPosRaise1**) + **chantPodatus2nd**

Climacus: **chantPunctumVirga** + (**staffPosLower1**) + **chantPunctumInclinatum** + (**staffPosLower1**) + **chantPunctumInclinatum**

Torculus: **chantPunctum** + **(staffPosRaise1)** + **chantPunctum** + **(staffPosLower1)** + **chantPunctum**

Porrectus flexus resupinus: **chantConnectingLineAsc5th** + **(staffPosRaise5)** + **chantPorrectus4th** + **(staffPosLower4)** + **chantConnectingLineAsc3rd** + **(staffPosRaise3)** + **chantPunctum**

Scandicus flexus: **chantPodatus2nd** + **(staffPosRaise2)** + **chantClivis3rd**

Porrectus flexus: **chantConnectingLineAsc3rd** + **(staffPosRaise3)** + **chantPorrectus3rd** + **(staffPosLower3)** + **chantClivis3rd**

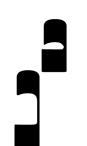

Climacus resupinus: **chantPunctumVirga** + **(staffPosLower1)** + **chantPunctumInclinatum** + **(staffPosLower1)** + **chantPunctumInclinatum** + **(staffPosRaise1)** + **chantPunctum**

Torculus resupinus: **chantPunctum** + **(staffPosRaise1)** + **chantPunctum** + **(staffPosLower1)** + **chantPunctum** + **(staffPosRaise1)** + **chantPunctumVirga**

Pes subbipunctus: **chantPodatus2nd** + **(staffPosLower1)** + **chantPunctumInclinatum** + **(staffPosLower1)** + **chantPunctumInclinatum**

Virga praetripunctis: **chantPodatus3rd** + **(staffPosRaise4)** + **chantPodatus2nd**

Epiphonus (liquescent podatus): **chantLiquescentAscLower** + **(staffPosRaise1)** + **chantLiquescentAscUpper**

Cephalicus (liquescent flexa): **chantConnectingLineAsc3rd** + **(staffPosRaise3)** + **chantLiquescentDescUpper** + **(staffPosLower1)** + **chantLiquescentDescLower**

Pinnosa (liquescent torculus): **chantPunctum** + **chantConnectingLineAsc4th** + **(staffPosRaise4)** + **chantLiquescentDescUpper** + **(staffPosLower1)** + **chantLiquescentDescLower**

Porrectus liquescens: **chantConnectingLineAsc3rd** + **(staffPosRaise3)** + **chantPunctum** + **(staffPosLower1)** + **chantLiquescentAscLower** + **(staffPosLower3)** + **chantLiquescentAscUpper**

Scandicus liquescens: **chantPunctum** + **(staffPosRaise1)** + **chantLiquescentAscLower** + **chantConnectingLineAsc3rd** + **(staffPosRaise3)** + **chantLiquescentAscUpper**

*wiggleRandom4*

Quasi-random squiggle 4

## Implementation notes

Scoring applications can combine these glyphs to produce lines of varying lengths. By way of example:

`ornamentTrill + wiggleTrillFastest + wiggleTrillFasterStill +  
wiggleTrillFaster + wiggleTrillFast + wiggleTrill +  
wiggleTrillSlower + wiggleTrillSlowerStill + wiggleTrill +  
wiggleTrillFaster + wiggleTrillFasterStill`

`10 x wiggleWavy`

`10 x wiggleSawtooth`

`6 x wiggleSquaretooth`

`wiggleCircularStart + wiggleCircularLargest +  
wiggleCircularLargerStill + wiggleCircularLarger +  
wiggleCircularLarge + wiggleCircularEnd`

`wiggleVibratoStart + wiggleVibratoSmallestFastest +  
wiggleVibratoMediumSlower +  
wiggleVibratoMediumSlowest +  
wiggleVibratoMediumFaster +  
wiggleVibratoMediumFasterStill, etc.`

Flute fingering chart, right-hand low C sharp trill

**U+EB3B***fingeringFluteRHLowBTrill*

Flute fingering chart, right-hand low B trill

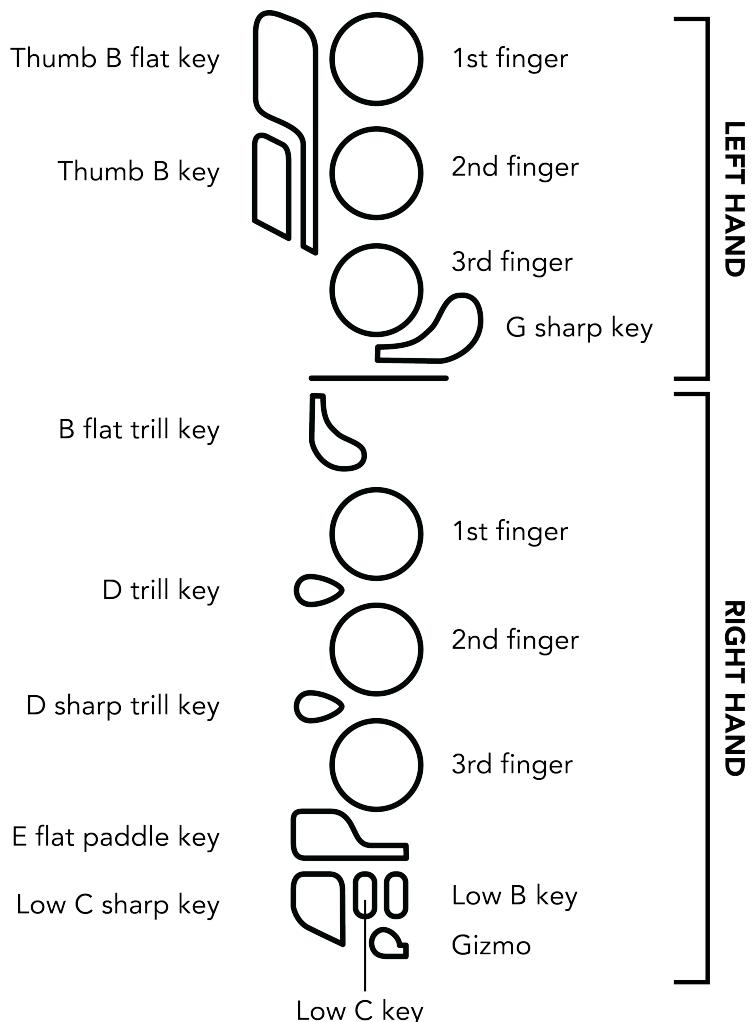

## Implementation notes

All of the glyphs in this range should have zero width, with all glyphs registered so that they overlay correctly (see examples below).

To construct a fingering chart, first use **fingeringFluteChart** to produce an empty chart for piccolo with all keys open; add **fingeringFluteCFoot** to add the low keys from a C foot flute, and add **fingeringFluteBFoot** to add the additional low B key if necessary.

To add closed, half-closed, quarter-closed or trill keys to the chart, simply add the relevant glyphs at the same position.

The following diagram shows the disposition of keys in the blank chart.

Here are a couple of examples of complete fingering charts. Note that they have been rotated counter-clockwise by 90 degrees:

C: `fingeringFluteChart, fingeringFluteCFoot, fingeringFluteBFoot, fingeringFluteLHThumbBClosed, fingeringFluteLH1stFingerClosed, fingeringFluteLH2ndFingerClosed, fingeringFluteLH3rdFingerClosed, fingeringFluteRH1stFingerClosed, fingeringFluteRH2ndFingerClosed, fingeringFluteRH3rdFingerClosed, fingeringFluteRHCSHarpClosed, fingeringFluteRHLowCClosed`

E: `fingeringFluteChart, fingeringFluteCFoot, fingeringFluteBFoot, fingeringFluteLHThumbBClosed, fingeringFluteLH1stFingerClosed, fingeringFluteLH2ndFingerClosed, fingeringFluteLH3rdFingerClosed, fingeringFluteRH1stFingerClosed, fingeringFluteRH2ndFingerClosed, fingeringFluteRHEFlatPaddleClosed`

E flat trill**Implementation notes**

All of the glyphs in this range should have zero width, with all glyphs registered so that they overlay correctly (see examples below).

To construct a fingering chart, first use **fingeringClarChart** to produce an empty chart for clarinet. To add the low E flat key found on the bass clarinet, next use **fingeringClarBassEFlatOpen**. To add closed, half-closed, quarter-closed or trill keys to the chart, simply add the relevant glyphs at the same position.

The following diagram shows the disposition of keys in the blank chart.

Here are a couple of examples of complete fingering charts. Note that they have been rotated counter-clockwise by 90 degrees:

C: `fingeringClarChart, fingeringClarLHRegisterClosed, fingeringClarLH1stFingerClosed, fingeringClarLH2ndFingerClosed, fingeringClarLH3rdFingerClosed`

High E: `fingeringClarChart, fingeringClarLHThumbClosed, fingeringClarLHRegisterClosed, fingeringClarLH1stFingerClosed, fingeringClarLH2ndFingerClosed, fingeringClarLH3rdFingerClosed, fingeringClarRHGSharpClosed`

E flat key trill**Implementation notes**

All of the glyphs in this range should have zero width, with all glyphs registered so that they overlay correctly (see examples below).

To construct a fingering chart, first use **fingeringOboeChart** to produce an empty chart. To add closed, half-closed, quarter-closed or trill keys to the chart, simply add the relevant glyphs at the same position.

The following diagram shows the disposition of keys in the blank chart.

Here are a couple of examples of complete fingering charts. Note that they have been rotated counter-clockwise by 90 degrees:

G: **fingeringOboeChart**, **fingeringOboeLH1stFingerClosed**,  
**fingeringOboeLH2ndFingerClosed**, **fingeringOboeLH3rdFingerClosed**

E flat: **fingeringOboeChart**, **fingeringOboeLH1stFingerClosed**,  
**fingeringOboeLH2ndFingerClosed**, **fingeringOboeLH3rdFingerClosed**,  
**fingeringOboeLHEFlatClosed**, **fingeringOboeRH1stFingerClosed**,  
**fingeringOboeRH2ndFingerClosed**, **fingeringOboeRH3rdFingerClosed**

# Fingering chart for bassoon (U+EBF0–U+EC3F)

## U+EBF0

*fingeringBsnChart*

Bassoon fingering chart, all open

## U+EBF1

*fingeringBsnChartThumbsHands*

Bassoon fingering chart, thumb/hand separators

## U+EBF2

*fingeringBsnLHHighEClosed*

Bassoon fingering chart, left-hand high E closed

## U+EBF3

*fingeringBsnLH1stFingerClosed*

Bassoon fingering chart, left-hand 1st finger closed

## U+EBF4

*fingeringBsnLHHighEFlatClosed*

Bassoon fingering chart, left-hand high E flat closed

## U+EBF5

*fingeringBsnLH2ndFingerClosed*

Bassoon fingering chart, left-hand 2nd finger closed

## U+EBF6

*fingeringBsnLH3rdFingerRingClosed*

Bassoon fingering chart, left-hand 3rd finger ring closed

## U+EBF7

*fingeringBsnLH3rdFingerClosed*

Bassoon fingering chart, left-hand 3rd finger closed

## U+EBF8

*fingeringBsnLHLowEFlatClosed*

Bassoon fingering chart, left-hand low E flat closed

## U+EBF9

*fingeringBsnLHLowDFlatClosed*

Bassoon fingering chart, left-hand low D flat closed

## U+EBFA

*fingeringBsnRHCSHarpTrillClosed*

Bassoon fingering chart, right-hand C sharp trill key closed

## U+EBFB

*fingeringBsnRH1stFingerClosed*

Bassoon fingering chart, right-hand 1st finger closed

## U+EBFD

## U+EBFD

*fingeringBsnRH2ndFingerClosed*

Bassoon fingering chart, right-hand 2nd finger closed

*fingeringBsnRH2ndFingerRingClosed*

Bassoon fingering chart, right-hand 2nd finger ring closed

## U+EBFF

*fingeringBsnRHLowGClosed*

Bassoon fingering chart, right-hand low G closed

## U+EBFE

*fingeringBsnRHBFatTrillClosed*

Bassoon fingering chart, right-hand B flat trill key closed

## U+EC01

*fingeringBsnRHFSharpClosed*

Bassoon fingering chart, right-hand alt. F sharp closed

## U+EC00

*fingeringBsnRHLowFClosed*

Bassoon fingering chart, right-hand low F closed

**U+EC02**

*fingeringBsnRHAFlatClosed*

Bassoon fingering chart, right-hand A flat closed

**U+EC04**

*fingeringBsnLTHighBClosed*

Bassoon fingering chart, left thumb high B closed

**U+EC06**

*fingeringBsnLTCSharpClosed*

Bassoon fingering chart, left thumb C sharp closed

**U+EC08**

*fingeringBsnLTLowBFlatClosed*

Bassoon fingering chart, left thumb low B flat closed

**U+EC0A**

*fingeringBsnLTLowCClosed*

Bassoon fingering chart, left thumb low C closed

**U+EC0C**

*fingeringBsnRTBFlatClosed*

Bassoon fingering chart, right thumb B flat closed

**U+EC0E**

*fingeringBsnRTLowFSharpClosed*

Bassoon fingering chart, right thumb low F sharp closed

**U+EC10**

*fingeringBsnLH1stFingerHalfClosed*

Bassoon fingering chart, left-hand 1st finger half-closed

**U+EC12**

*fingeringBsnLH3rdFingerHalfClosed*

Bassoon fingering chart, left-hand 3rd finger half-closed

**U+EC03**

*fingeringBsnLTHighDClosed*

Bassoon fingering chart, left thumb high D closed

**U+EC05**

*fingeringBsnLTHighAClosed*

Bassoon fingering chart, left thumb high A closed

**U+EC07**

*fingeringBsnLTWhisperKeyClosed*

Bassoon fingering chart, left thumb whisper key closed

**U+EC09**

*fingeringBsnLTLowBClosed*

Bassoon fingering chart, left thumb low B closed

**U+EC0B**

*fingeringBsnLTLowDClosed*

Bassoon fingering chart, left thumb low D closed

**U+EC0D**

*fingeringBsnRTLowEClosed*

Bassoon fingering chart, right thumb low E closed

**U+EC0F**

*fingeringBsnRTAFlatClosed*

Bassoon fingering chart, right thumb A flat closed

**U+EC11**

*fingeringBsnLH2ndFingerHalfClosed*

Bassoon fingering chart, left-hand 2nd finger half-closed

**U+EC13**

*fingeringBsnRH1stFingerHalfClosed*

Bassoon fingering chart, right-hand 1st finger half-closed

**U+EC14**

*fingeringBsnRH2ndFingerHalfClosed*

Bassoon fingering chart, right-hand  
2nd finger half-closed

**U+EC16**

*fingeringBsnLH2ndFingerQuarterClosed*

Bassoon fingering chart, left-hand  
2nd finger quarter-closed

**U+EC18**

*fingeringBsnRH1stFingerQuarterClosed*

Bassoon fingering chart, right-hand  
1st finger quarter-closed

**U+EC1A**

*fingeringBsnLH1stFingerThreeQuartersClosed*

Bassoon fingering chart, left-hand 1st  
finger three-quarters closed

**U+EC1C**

*fingeringBsnLH3rdFingerThreeQuartersClosed*

Bassoon fingering chart, left-hand 3rd  
finger three-quarters closed

**U+EC1E**

*fingeringBsnRH2ndFingerThreeQuartersClosed*

Bassoon fingering chart, right-hand  
2nd finger three-quarters closed

**U+EC20**

*fingeringBsnLH1stFingerTrill*

Bassoon fingering chart, left-hand 1st  
finger trill

**U+EC22**

*fingeringBsnLH2ndFingerTrill*

Bassoon fingering chart, left-hand  
2nd finger trill

**U+EC24**

*fingeringBsnLHLowEFlatTrill*

Bassoon fingering chart, left-hand low  
E flat trill

**U+EC15**

*fingeringBsnLH1stFingerQuarterClosed*

Bassoon fingering chart, left-hand 1st  
finger quarter-closed

**U+EC17**

*fingeringBsnLH3rdFingerQuarterClosed*

Bassoon fingering chart, left-hand 3rd  
finger quarter-closed

**U+EC19**

*fingeringBsnRH2ndFingerQuarterClosed*

Bassoon fingering chart, right-hand  
2nd finger quarter-closed

**U+EC1B**

*fingeringBsnLH2ndFingerThreeQuartersClosed*

Bassoon fingering chart, left-hand  
2nd finger hole three-quarters closed

**U+EC1D**

*fingeringBsnRH1stFingerThreeQuartersClosed*

Bassoon fingering chart, right-hand  
1st finger three-quarters closed

**U+EC1F**

*fingeringBsnLHHighETrill*

Bassoon fingering chart, left-hand  
high E trill

**U+EC21**

*fingeringBsnLHHighEFlatTrill*

Bassoon fingering chart, left-hand  
high E flat trill

**U+EC23**

*fingeringBsnLH3rdFingerRingTrill*

Bassoon fingering chart, left-hand 3rd  
finger ring trill

**U+EC25**

*fingeringBsnLHLowDFlatTrill*

Bassoon fingering chart, left-hand  
low D flat trill

**U+EC26**

*fingeringBsnRHCSHarpTrillTrill*

Bassoon fingering chart, right-hand C sharp trill key trill

**U+EC28**

*fingeringBsnRH2ndFingerTrill*

Bassoon fingering chart, right-hand 2nd finger trill

**U+EC2A**

*fingeringBsnRHLowGTrill*

Bassoon fingering chart, right-hand low G trill

**U+EC2C**

*fingeringBsnRHFSharpTrill*

Bassoon fingering chart, right-hand F sharp trill

**U+EC2E**

*fingeringBsnLTHighDTrill*

Bassoon fingering chart, left thumb high D trill

**U+EC30**

*fingeringBsnLTHighATrill*

Bassoon fingering chart, left thumb high A trill

**U+EC32**

*fingeringBsnLTWhisperKeyTrill*

Bassoon fingering chart, left thumb whisper key trill

**U+EC34**

*fingeringBsnLTLowBTrill*

Bassoon fingering chart, left thumb low B trill

**U+EC36**

*fingeringBsnLTLowDTrill*

Bassoon fingering chart, left thumb low D trill

**U+EC27**

*fingeringBsnRH1stFingerTrill*

Bassoon fingering chart, right-hand 1st finger trill

**U+EC29**

*fingeringBsnRHBFFlatTrillTrill*

Bassoon fingering chart, right-hand B flat trill key trill

**U+EC2B**

*fingeringBsnRHLowFTrill*

Bassoon fingering chart, right-hand low F trill

**U+EC2D**

*fingeringBsnLTCSharpTrill*

Bassoon fingering chart, left thumb C sharp trill

**U+EC33**

*fingeringBsnLTLowBFlatTrill*

Bassoon fingering chart, left thumb low B flat trill

**U+EC35**

*fingeringBsnLTLowCTrill*

Bassoon fingering chart, left thumb low C trill

**U+EC37**

*fingeringBsnRTBFlatTrill*

Bassoon fingering chart, right thumb B flat trill

**U+EC38***fingeringBsnRTLowETrill*

Bassoon fingering chart, right thumb  
low E trill

**U+EC39***fingeringBsnRTLowFSharpTrill*

Bassoon fingering chart, right thumb  
low F sharp trill

**U+EC3A***fingeringBsnRTAFlatTrill*

Bassoon fingering chart, right thumb  
A flat trill

**Implementation notes**

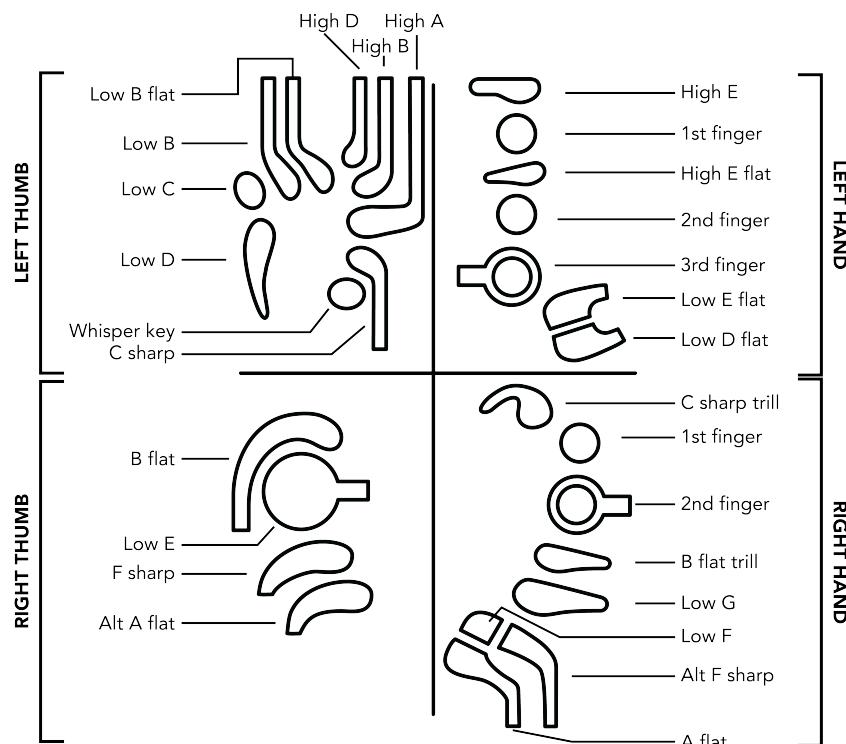

All of the glyphs in this range should have zero width, with all glyphs registered so that they overlay correctly (see examples below).

To construct a fingering chart, first use **fingeringBsnChart** to produce an empty chart.

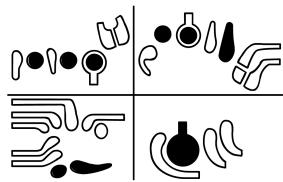

To add the vertical and horizontal separators for hands and thumbs, use

**fingeringBsnChartThumbsHands**. To add closed, half-closed, quarter-closed or trill keys to the chart, simply add the relevant glyphs at the same position.

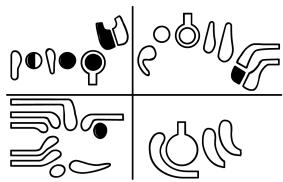

The following diagram shows the disposition of keys in the blank chart.

Here are a couple of examples of complete fingering charts. Note that they have been rotated counter-clockwise by 90 degrees:

C: `fingeringBsnChart`, `fingeringBsnChartThumbsHands`,  
`fingeringBsnLH1stFingerClosed`, `fingeringBsnLH2ndFingerClosed`,  
`fingeringBsnLH3rdFingerClosed`, `fingeringBsnRH1stFingerClosed`,  
`fingeringBsnRH2ndFingerClosed`, `fingeringBsnRHLowGClosed`,  
`fingeringBsnLTLowCClosed`, `fingeringBsnLTLowDClosed`,  
`fingeringBsnRTLowEClosed`

High G: `fingeringBsnChart`, `fingeringBsnChartThumbsHands`,  
`fingeringBsnLH1stFingerHalfClosed`, `fingeringBsnLH2ndFingerClosed`,  
`fingeringBsnLH3rdFingerClosed`, `fingeringBsnLHLowEFlatClosed`,  
`fingeringBsnRH1stFingerClosed`, `fingeringBsnRHLowFClosed`,  
`fingeringBsnLTWhisperKeyClosed`

# Fingering chart for saxophone (U+EC40–U+EC7F)

Saxophone fingering chart, right-hand low C trill

**U+EC77***fingeringSaxBariLowATrill*

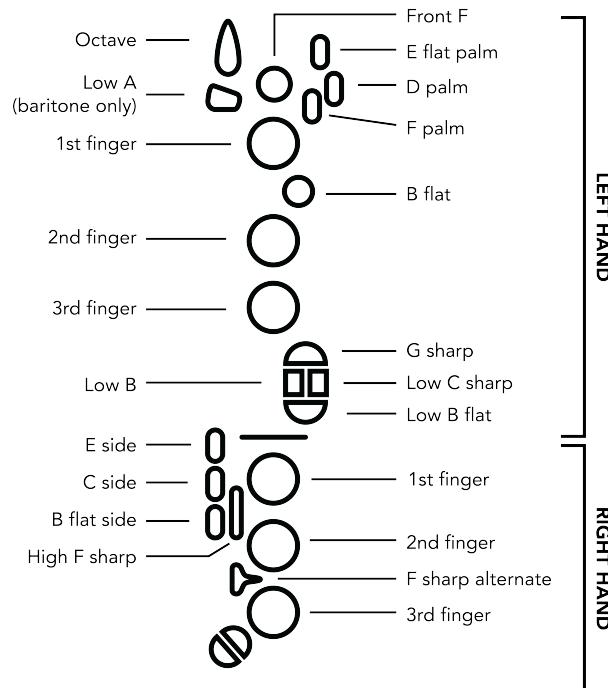

Saxophone fingering chart, baritone low A trill

**Implementation notes**

All of the glyphs in this range should have zero width, with all glyphs registered so that they overlay correctly (see examples below).

To construct a fingering chart, first use **fingeringSaxChart** to produce an empty chart for soprano, alto or tenor saxophone. To add the low A key found on a baritone saxophone, use **fingeringSaxBariLowAOpen**. To add closed, half-closed, quarter-closed or trill keys to the chart, simply add the relevant glyphs at the same position.

The following diagram shows the disposition of keys in the blank chart.

Here are a couple of examples of complete fingering charts. Note that they have been rotated counter-clockwise by 90 degrees:

D: *fingeringSaxChart, fingeringSaxLHOctaveClosed, fingeringSaxLH1stFingerClosed, fingeringSaxLH2ndFingerClosed, fingeringSaxLH3rdFingerClosed, fingeringSaxRH1stFingerClosed, fingeringSaxRH2ndFingerClosed, fingeringSaxRH3rdFingerClosed*

**U+EC92***fingeringRecRH2ndDoubleHoleRightHalfClosedLeft*

Recorder fingering chart, right-hand 2nd double hole right half-closed (left)

**U+EC94***fingeringRecLH1stFingerHalfClosedRight*

Recorder fingering chart, left-hand 1st finger half-closed (right)

**U+EC96***fingeringRecLH3rdFingerHalfClosedRight*

Recorder fingering chart, left-hand 3rd finger half-closed (right)

**U+EC98***fingeringRecRH1stDoubleHoleLeftHalfClosedRight*

Recorder fingering chart, right-hand 1st double hole left half-closed (right)

**U+EC9A***fingeringRecRH2ndDoubleHoleLeftHalfClosedRight*

Recorder fingering chart, right-hand 2nd double hole left half-closed (right)

**U+EC9C***fingeringRecLHThumbQuarterClosedLeft*

Recorder fingering chart, left-hand thumb quarter-closed (left)

**U+EC9E***fingeringRecLH2ndFingerQuarterClosedLeft*

Recorder fingering chart, left-hand 2nd finger quarter-closed (left)

**U+ECA0***fingeringRecRH1stFingerQuarterClosedLeft*

Recorder fingering chart, right-hand 1st finger quarter-closed (left)

**U+ECA2***fingeringRecRH1stDoubleHoleRightQuarterClosedLeft*

Recorder fingering chart, right-hand 1st double hole right quarter-closed (left)

**U+EC93***fingeringRecLHThumbHalfClosedRight*

Recorder fingering chart, left-hand thumb half-closed (right)

**U+EC95***fingeringRecLH2ndFingerHalfClosedRight*

Recorder fingering chart, left-hand 2nd finger half-closed (right)

**U+EC97***fingeringRecRH1stFingerHalfClosedRight*

Recorder fingering chart, right-hand 1st finger half-closed (right)

**U+EC99***fingeringRecRH1stDoubleHoleRightHalfClosedRight*

Recorder fingering chart, right-hand 1st double hole right half-closed (right)

**U+EC9B***fingeringRecRH2ndDoubleHoleRightHalfClosedRight*

Recorder fingering chart, right-hand 2nd double hole right half-closed (right)

**U+EC9D***fingeringRecLH1stFingerQuarterClosedLeft*

Recorder fingering chart, left-hand 1st finger quarter-closed (left)

**U+EC9F***fingeringRecLH3rdFingerQuarterClosedLeft*

Recorder fingering chart, left-hand 3rd finger quarter-closed (left)

**U+ECA1***fingeringRecRH1stDoubleHoleLeftQuarterClosedLeft*

Recorder fingering chart, right-hand 1st double hole left quarter-closed (left)

**U+ECA3***fingeringRecRH2ndDoubleHoleLeftQuarterClosedLeft*

Recorder fingering chart, right-hand 2nd double hole left quarter-closed (left)

**U+ECA4**

*fingeringRecRH2ndDoubleHoleRightQuarterClosedLeft*

Recorder fingering chart, right-hand 2nd double hole right quarter-closed (left)

**U+ECA6**

*fingeringRecLH1stFingerQuarterClosedRight*

Recorder fingering chart, left-hand 1st finger quarter-closed (right)

**U+ECA8**

*fingeringRecLH3rdFingerQuarterClosedRight*

Recorder fingering chart, left-hand 3rd finger quarter-closed (right)

**U+ECAA**

*fingeringRecRH1stDoubleHoleLeftQuarterClosedRight*

Recorder fingering chart, right-hand 1st double hole left quarter-closed (right)

**U+ECAC**

*fingeringRecRH2ndDoubleHoleLeftQuarterClosedRight*

Recorder fingering chart, right-hand 2nd double hole left quarter-closed (right)

**U+ECAE**

*fingeringRecLHThumbTrill*

Recorder fingering chart, left-hand thumb trill

**U+ECB0**

*fingeringRecLH2ndFingerTrill*

Recorder fingering chart, left-hand 2nd finger trill

**U+ECB2**

*fingeringRecRH1stFingerTrill*

Recorder fingering chart, right-hand 1st finger trill

**U+ECB4**

*fingeringRecRH1stDoubleHoleRightTrill*

Recorder fingering chart, right-hand 1st double hole right trill

**U+ECA5**

*fingeringRecLHThumbQuarterClosedRight*

Recorder fingering chart, left-hand thumb quarter-closed (right)

**U+ECA7**

*fingeringRecLH2ndFingerQuarterClosedRight*

Recorder fingering chart, left-hand 2nd finger quarter-closed (right)

**U+ECA9**

*fingeringRecRH1stFingerQuarterClosedRight*

Recorder fingering chart, right-hand 1st finger quarter-closed (right)

**U+ECAB**

*fingeringRecRH1stDoubleHoleRightQuarterClosedRight*

Recorder fingering chart, right-hand 1st double hole right quarter-closed (right)

**U+ECAD**

*fingeringRecRH2ndDoubleHoleRightQuarterClosedRight*

Recorder fingering chart, right-hand 2nd double hole right quarter-closed (right)

**U+ECAF**

*fingeringRecLH1stFingerTrill*

Recorder fingering chart, left-hand 1st finger trill

**U+ECB1**

*fingeringRecLH3rdFingerTrill*

Recorder fingering chart, left-hand 3rd finger trill

**U+ECB3**

*fingeringRecRH1stDoubleHoleLeftTrill*

Recorder fingering chart, right-hand 1st double hole left trill

**U+ECB5**

*fingeringRecRH2ndDoubleHoleLeftTrill*

Recorder fingering chart, right-hand 2nd double hole left trill

**U+ECB6**`fingeringRecRH2ndDoubleHoleRightTrill`

- ‘ Recorder fingering chart, right-hand 2nd double hole right trill

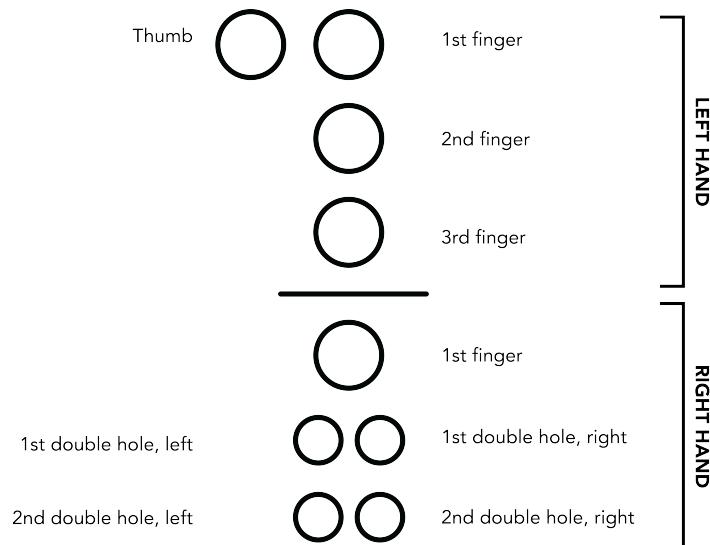

**Implementation notes**

All of the glyphs in this range should have zero width, with all glyphs registered so that they overlay correctly (see examples below).

To construct a fingering chart, first use **fingeringRecChart** to produce an empty chart.

To add closed, half-closed, quarter-closed or trill keys to the chart, simply add the relevant glyphs at the same position.

The following diagram shows the disposition of keys in the blank chart.

Here are a couple of examples of complete fingering charts. Note that they have been rotated counter-clockwise by 90 degrees:

C: **fingeringRecChart**, **fingeringRecLHThumbClosed**,  
**fingeringRecLH2ndFingerClosed**

G: **fingeringRecChart**, **fingeringRecLHThumbClosed**,  
**fingeringRecLH1stFingerClosed**, **fingeringRecLH2ndFingerClosed**,  
**fingeringRecLH3rdFingerClosed**
